MARKETING CHANNEL REVIEW

Which channels drove revenue?

Paid search, social and display, 78 weeks to 29 June 2026

MERIDIAN

Search drove the ad-linked revenue; display is unproven

- **Paid search:** each 1 spent returned about 3.2 in revenue (range 2.8 to 3.5)
- **Social:** about 1.1 per 1 spent (0.6 to 1.6); barely covers its own cost before margin
- **Display:** about 0.8 per 1 spent (range −0.5 to 2.0); cannot be told apart from zero
- **Baseline:** nearly half of revenue arrives with no ad spend behind it

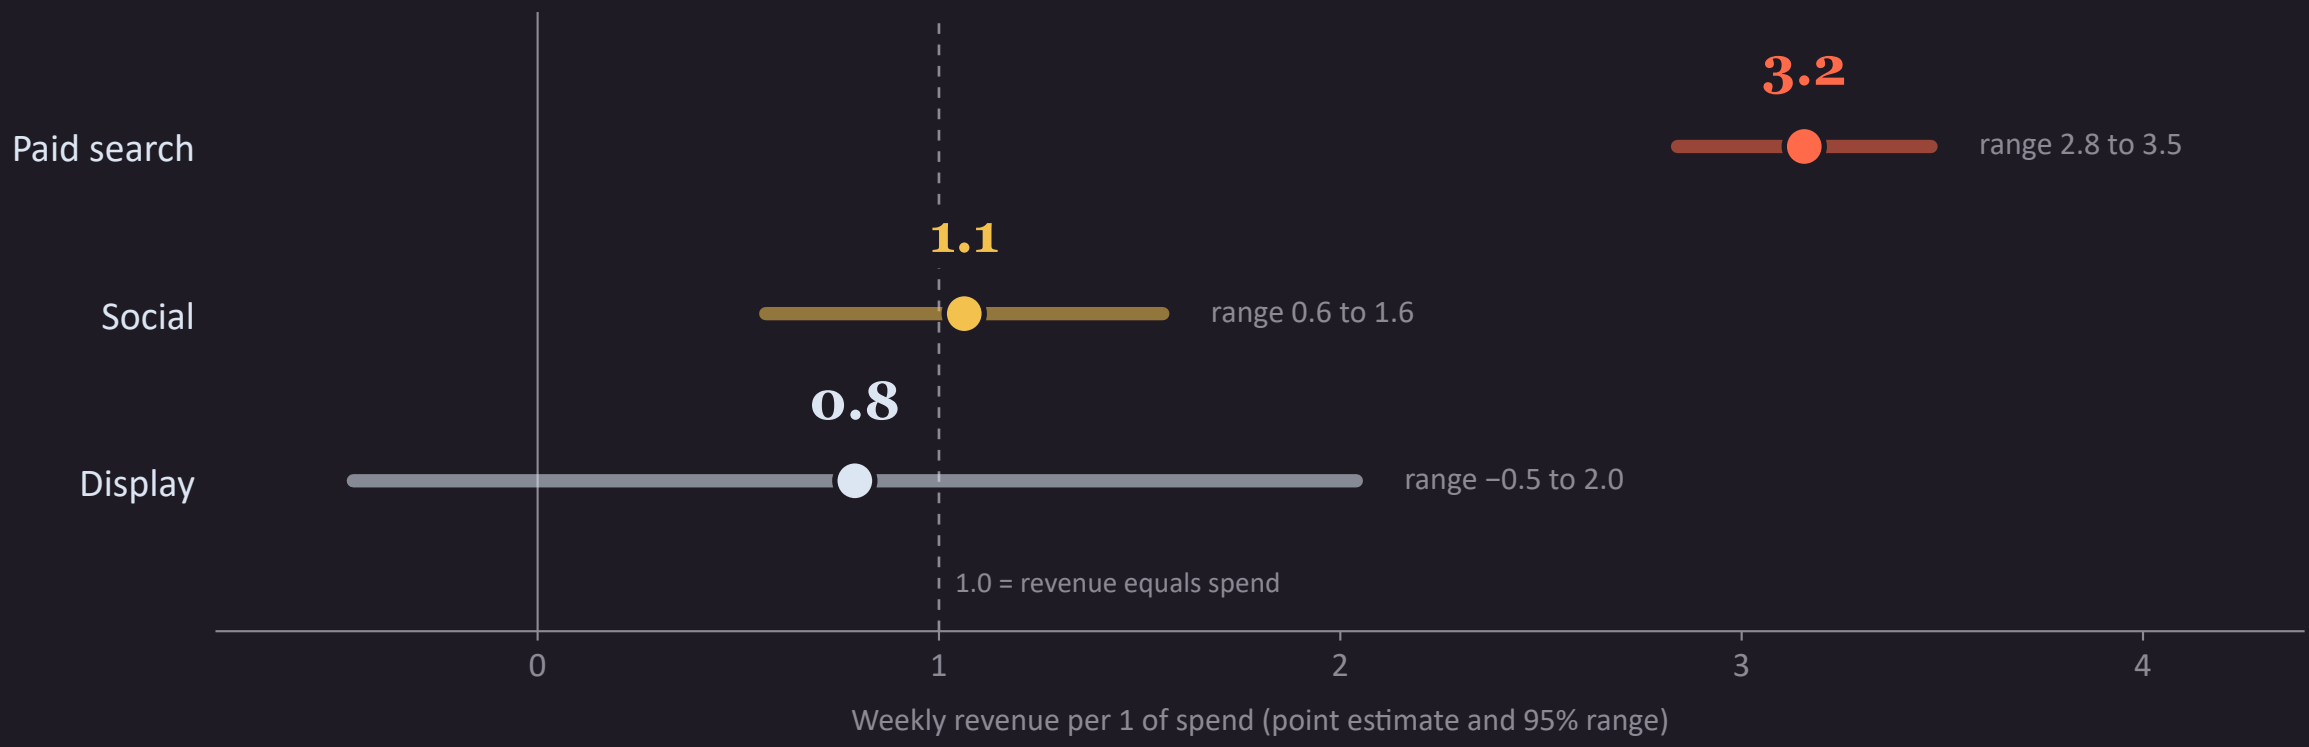

42%
of revenue came from paid search

3.2
revenue per 1 spent on search

48%
baseline revenue, no ads needed

MERIDIAN

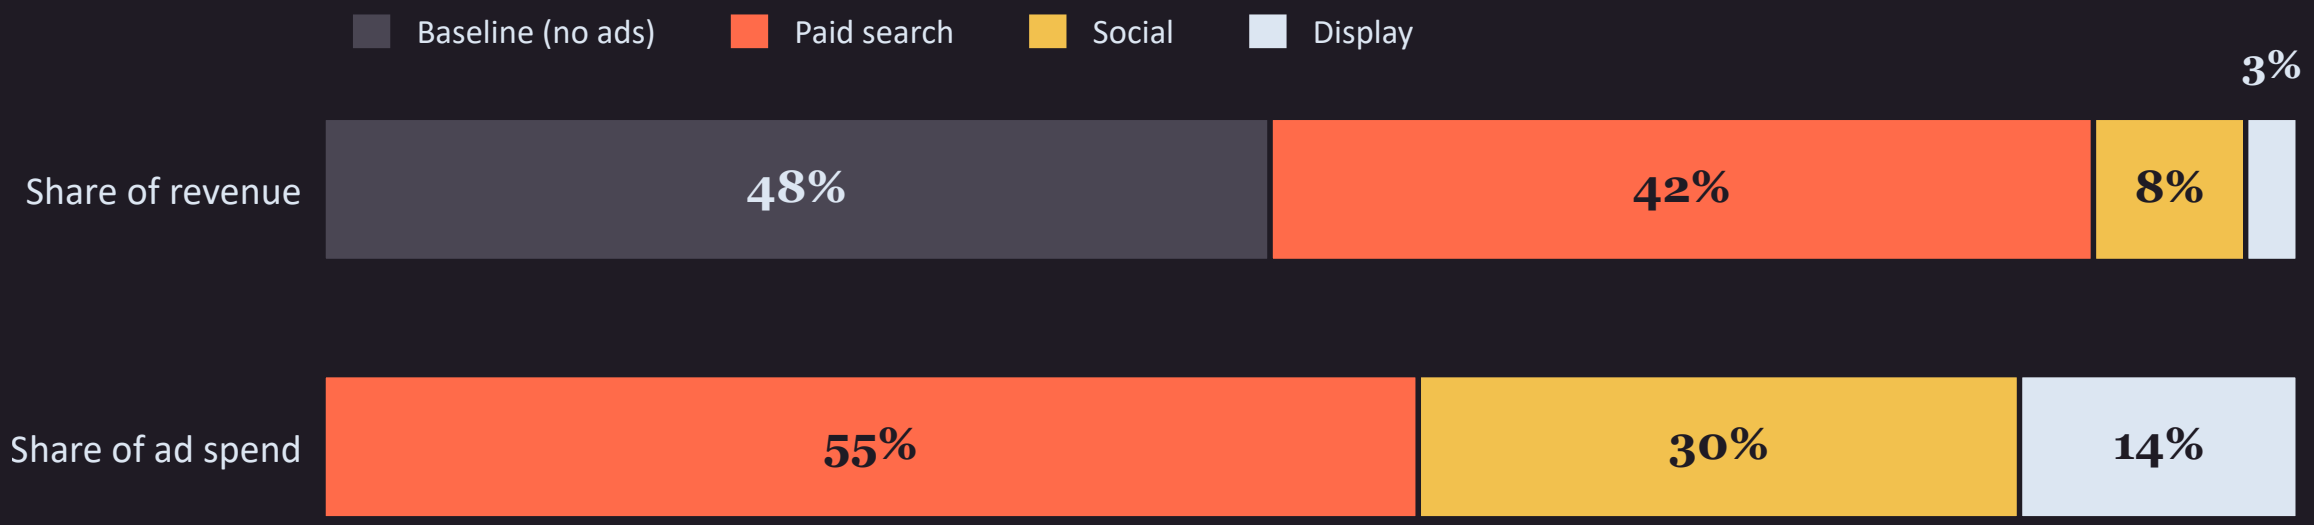

Search returns 3.2 per 1 spent; social about 1; display unclear

Weekly revenue regressed on weekly spend by channel, 78 weeks, Jan 2025 to Jun 2026. Bars show 95% ranges; display's range crosses zero.

MERIDIAN

Social and display: 45% of ad spend, 10% of revenue

Search takes 55% of ad spend and delivers 42% of revenue. Baseline, the revenue we would see with ads switched off, is 48%.

Revenue shares are model-implied (spend × estimated return); percentages are rounded and may not sum to 100.

MERIDIAN

Protect search; test social and display before moving money

- Keep paid search funded; it is the one channel with a clear, stable return
- Hold social and display flat until a holdout test shows what they add
- Extend the geo-holdout design proposed for search to social and display
- Read these as associations: spend was not randomised, so only a holdout settles cause
